Abstracts

Seafood is perceived as an excellent source of high-quality protein holding lipids, high levels of unsaturated fatty acids, and possibly augments human health by reducing the risk of cardiovascular disease. There are numerous species of seafoods falling primarily under the category of four types, namely finfish, crustaceans, mollusks, and others. The equipment required to process different types of seafoods vary on the basis of purpose. The types of equipment covered in this report consist of gutting, scaling, skinning, deboning, filleting, and others.

The demand for seafood and seafood products has grown exponentially over the years, owing to rise in health consciousness, growth in population, and increase in disposable income among consumers worldwide. Moreover, rise in trend regarding proper intake of nutrition required to maintain optimal health boosts the market growth. Since seafoods make a good and high-quality source of protein, the preference for consuming seafood and seafood products has gained momentum. This has consequently driven the market demand for the equipment required to process these seafoods throughout the value chain. Furthermore, rise in demand for automated machinery by manufacturers in the food processing industry has created a positive impact on the seafood processing equipment market. The growing popularity of fish and seafood specialties has compelled processors to use enhanced equipment to meet the market demand. However, the deterioration of marine bodies due factors such as high-water acidity and increased uptake of carbon dioxide negatively affected the population of several seafood species and hence this can pose a major threat to the seafood processing

equipment market.

On the contrary, the development of intelligent equipment for smart factories through data analytics and integrated technologies are set to gain great significance. Adopting unceasing innovation through extensive research and development to not only sustain the competition but also satisfy the customers changing demand can be regarded as an opportunity for manufacturers to expand the market base.

The global seafood processing equipment market is segmented into seafood type, equipment types, and region. The seafood type segment comprises finfish, crustaceans, mollusks, and others. The equipment types covered in the study include gutting, scaling, skinning, deboning, filleting, and others. Region wise, the market is studied across North America, Europe, Asia-Pacific, and LAMEA.

The major players in the global seafood processing equipment industry analyzed in this report include Marel, JBT, BAADER, Seafood Technology Limited, Cabinplant, Pisces Fish Machinery Inc., M.T.C. Food Equipment, Inc., Uni-Food Technic A/S, Subzero, and SEAC AB.
