## **Abstracts**

flexible endoscope market Overview:

Endoscopy is a minimally invasive medical procedure used for diagnosis, prevention, and treatment of complications in visceral organs. The device is either placed in the body through natural openings or cavities (such as anus and mouth) or through incisions, especially in case of arthroscopy. The South Asia flexible endoscope market was valued at \$284 million in 2017, and is anticipated to reach \$510 million by 2025, registering a CAGR of 7.4%.

Flexible endoscopy devices are equipped with several other parts such as camera or light source at the tip of endoscopes that help physicians or medical professionals to analyze the internal organs of interest. Endoscopy is used to evaluate various conditions such as stomach pain, ulcers, gastritis, digestive tract bleeding, cancerous growth in colon, and changes in bowel habits. Moreover, it is categorized based on the area of the body that are investigated. This includes knee & joints (arthroscopy), lungs (bronchoscopy), colon (colonoscopy), abdominal & pelvic areas (laparoscopy), and others. Increase in the incident rate of targeted diseases such as colon cancer and gastrointestinal disorders propels the demand for endoscopic devices.

Surge in geriatric population, which is highly susceptible to pain and chronic disorders, is expected to have a positive impact on the market growth. In addition, rise in need for the development of advanced minimally invasive surgical techniques is expected to augment the demand for endoscopic devices across healthcare settings. This in turn fuels the market growth. However, dearth of trained professionals for handling of endoscopic devices impedes the growth of the market. Conversely, high untapped potential in emerging economies is anticipated to offer significant profitable opportunities for market expansion.

The South Asia flexible endoscope market is segmented based on application into bronchoscopy, laparoscopy, arthroscopy, gastrointestinal endoscopy, urology endoscopy, neuro endoscopy, obstetrics/gynecology endoscopy, ENT endoscopy, and others. Depending on end user, the market is fragmented into hospitals, clinics, and others. Country wise, the market is analyzed across India, Pakistan, Bangladesh, Nepal, Sri Lanka, and rest of Asia.
