Abstracts

Spirulina is a natural algae powder known as cyanobacteria that comprises potent level of proteins, antioxidants, and vitamin B and other nutrients. Spirulina exhibits various benefits such as lowering of LDL and triglyceride levels and anticancer properties. It also reduces blood pressure, is effective against anemia, and improves muscle strength. The global spirulina market generated \$348 million in 2018, and is projected to reach \$779 million by 2026, growing at a CAGR of 10.5% from 2019 to 2026.

The increase in use of spirulina as a dietary food supplement, owing to its high nutritional content is the major factor that drives the spirulina market. Furthermore, increase in adoption of healthy food in developed countries fuel the market growth of spirulina in food & beverages. The rise in prevalence of cancer, cardiovascular diseases, immune diseases, and other diseases boosts the demand of spirulina.

Furthermore, increase in healthcare expenditure and disposable income among the population is anticipated to increase the market growth. However, limited resource of spirulina as it is extracted from the freshwater sources that are available in very few areas hinders the market growth. Emerging economies such as India, China, Mexico, and Brazil are anticipated to provide new opportunities for the market growth during the forecast period.

The global spirulina market is segmented into type, application, drug formulation, and region. By type, the market is bifurcated into *Arthrospira Platensis* and *Arthrospira Platensis*. Based on application, it is categorized into nutraceuticals, cosmetics, food & beverages, agriculture, feed, and others. Based on drug formulation, the spirulina market is categorized into powder, tablet & capsule, liquid, and granule & gelling agent.
