Abstracts

The global spirulina market was valued at \$393.6 million in 2019, and is projected to reach \$897.61 million by 2027, registering a CAGR of 10.5% from 2020 to 2027.

Spirulina is a natural algae powder known as cyanobacteria that includes potent level of proteins, antioxidants, and vitamin B and other nutrients. It exhibits various benefits such as lowering of LDL and triglyceride levels. It also exhibits anticancer properties, helps reduce blood pressure, is effective against anemia, and improves muscle strength.

Spirulina is used in various applications, such as food & beverages, dietary supplements, pharmaceuticals, animal & aquaculture, and cosmetic & personal care industry. In the last two years, multiple products were launched in the food & beverage industry in which it was used as a primary ingredient. Natural blue and green color produced from it is in high demand, and witnessed a strong market growth in the last two years.

The increase in use of spirulina as a dietary food supplement, owing to its high nutritional content is the major factor that drives the growth of the spirulina market. Furthermore, increase in adoption of healthy food in developed countries fuel the

market growth in the food & beverages sector. The rise in prevalence of cancer, cardiovascular diseases, immune diseases, and other diseases boosts the demand for spirulina among its end users.

Furthermore, increase in healthcare expenditure and rise in disposable income among the population is anticipated to foster the market growth. However, limited resource of spirulina as it is extracted from freshwater sources that are available in very few areas hinders the market growth. Emerging economies such as India, China, Mexico, and Brazil are anticipated to provide new opportunities for the market growth during the forecast period.
