## Abstracts

The global stacker market was valued at \$2,033.1 million in 2018, and is projected to reach \$ 3,136.2 million by 2026, growing at a CAGR of 5.3% from 2019 to 2026. A stacker is a manually operated material handling machine, which is used in warehouses and industries for moving and loading goods from one place to another. It serves the needs of various industries, owing to its advantageous features such as maneuverability, safety, portability, and strength.

Stackers offer better accessibility in closed & compact areas, can easily be relocated from one location to another, lowers costs, and is easy to maintain. In addition, the demand for safe and efficient material handling equipment in various cross industry verticals has led to an increase in adoption of stackers over the recent years. These advantages are anticipated to drive the growth of the market in the coming years. However, rise in trend of adoption of forklifts is anticipated to hamper the market growth. Furthermore, technical innovations and advancements in stackers offer lucrative growth opportunities for the market players.

The global stacker market is segmented into type, end-user, and region. Depending on type, it is segmented into electric, manual/hydraulic, and semi-electric. On the basis of end-user, it is categorized into retail & wholesale, logistics, automobile, food & beverages, and others. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
