The global tattoo removal market was valued at \$11,614 million in 2016, and is projected to reach at \$27,317 million by 2023, growing at a CAGR of 12.7% from 2017 to 2023. Tattoo removal is a process of removing permanent tattoo from the skin. The removal process is undertaken by using laser, surgical, creams, and various other processes. The use of laser techniques for tattoo removal is the predominant tattoo removal process in the industry.

The other options available for tattoo removal include surgical excision, tattoo removal creams, dermabrasion, plastic surgery, and others. Creams are less painful than laser and surgical procedures to remove tattoos, but, it is time taking and relatively less efficient.

Furthermore, change in preferences and lifestyles of the tattooed people owing to various social and personal situations has surged the tattoo removal process. However, the high cost associated with the tattoo removal is anticipated to hinder the market growth.
