Abstracts

The tattoo removal market was valued at \$0.5 billion in 2023 and is estimated to reach \$4.0 billion by 2035, exhibiting a CAGR of 19.1% from 2024 to 2035. Tattoo removal refers to the process of eliminating or fading unwanted tattoos from the skin. Various techniques are employed to break down the tattoo pigment particles embedded in the skin, allowing the body's natural processes to gradually remove them. The most common method involves the use of lasers, which emit high-intensity light pulses targeted at the tattoo ink, causing it to fragment into smaller particles that can be absorbed and eliminated by the body's immune system. Other techniques include surgical excision, chemical peels, and dermabrasion. Tattoo removal procedures are typically performed by dermatologists, cosmetic surgeons, or trained medical professionals and may require multiple sessions to achieve desired results, depending on factors such as tattoo size, color, and depth. The tattoo removal market is witnessing a significant growth rate, owing to effective tattoo removals and rise in popularity of tattoo removal procedures among the population. As per the Harris Research Poll, one in four people regret their tattoo, owing to different reasons, for instance, many people are too young when they get their tattoos. In addition, factors such as lifestyle changes, unprofessional appearance of tattoos, and meaninglessness tattoos lead to the growth in their removal, which in turn boosts the market growth. According to the International Society of Aesthetic Plastic Surgery (ISAPS), 2022, about 14.8% of non-surgical tattoo removal procedures were performed globally. Moreover, according to the American Society for Aesthetic Plastic Surgery, 2022, about 298,224.86 non-surgical

laser tattoo removal procedures were performed worldwide. Moreover, availability of advanced tattoo removal treatments and increase in number of tattoo artists and parlors opting for lasers to remove and modify tattoos supplement the market growth. Thus, the aforementioned factors have collectively contributed toward growth of the tattoo removal market. The global tattoo removal market is segmented into procedures, end user, and region. On the basis of procedures, the market is fragmented into laser procedure, surgical procedure, creams, and others. On the basis of end user, the market is segmented into hospitals, clinics, and others. Region-wise, it is analyzed across Asia-Pacific (U.S., Canada, and Mexico), Europe (Germany, France, UK, Italy, Spain, and rest of Europe), Asia-Pacific (China, Japan, India, Australia, South Korea, and rest of Asia-Pacific), and LAMEA (Brazil, South Africa, North Africa, Middle East & Africa). The key players that operate in the tattoo removal market are Sisram Medical (Alma Lasers), Cipher Pharmaceuticals Inc., Soliton, Inc., Cynosure, Candela Corporation., Lumenis Ltd., Fotona, and Berry Global Group, Inc. The key players have adopted product launch, product development, collaboration, partnership and product approval as the key strategies to strengthen their foothold in the competitive market.
