Abstracts

The trimethylhydroquinone market was valued at \$944.2 million in 2020, and is projected to reach \$1,282.6 million by 2028, growing at a CAGR of 4.0% from 2021 to 2028.

Trimethylhydroquinone is also known as 2,3,5-trimethylhydroquinone. It comes under phenol category. It is used in numerous applications such as synthesis of vitamin E, dyes, pigments, polymerization inhibitors, antioxidants, and others. However, the major utilization of trimethylhydroquinone is as an intermediate in the industrial production of vitamin E. Attributed to the significance of vitamin E in food manufacturing, cattle breeding, and medicine, there is rising interest in the production of 2,3,5-trimethylhydroquinone.

The factor contributing toward the market growth is rising demand for dietary supplements. In addition, the growing market for personal care and food industry also increasingly propels the trimethylhydroquinone market growth. However, stringent regulation regarding the use of trimethylhydroquinone and presence of alternatives are some of the challenges for the market. On the contrary, rising consumer base in developing regions is expected to create lucrative opportunities for the market.
