## Abstracts

Used cooking oil also known as waste cooking oil is obtained as a result of the repeated use of vegetable oils for food in restaurants, hotels, and food industries as well as household sectors. The used cooking oil can be obtained from a range of vegetable oil including sunflower, palm, rape, soya, and others and are usually available in huge volume in mixed composition. Used cooking oil is a substitute of vegetable oil in the production of biodiesel, oleo chemicals, and animal feed. The used cooking is considered as a waste material and does not compete in the market. Thus, it has low cost than vegetable oil and is easily available in bulk quantities. This drives the growth of the used cooking oil market.

Rise in use of used cooking oil for the production of biodiesel fuels the growth of the used cooking oil market. In addition, the wide application of used cooking in the production of hydrogen gas, bio lubricants, grease, oleo chemicals, animal feed, and others also increases the demand for used cooking oil in these industries. This in turn fosters the used cooking oil market growth. However, the rise in theft of used cooking oil and the lack of awareness regarding the use of used cooking oil especially among the household sectors is anticipated to hamper the growth of the used cooking oil market in the upcoming years. Nevertheless, the rise in adoption of used cooking oil in the oleo chemical industry and the initiatives taken by the government for the collection of used cooking oil is expected to offer immense opportunity for used cooking oil market in the upcoming years.

The global used cooking oil market is segmented on the basis of source, application, and region. By source, it is classified into household sector and commercial sector. By application, it is divided into bio diesel, oleo chemicals, animal feed and others. By region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
