Abstracts

Very light jet refers to the type of small jet solution, which has seating capacity less than 10 people and maximum takeoff load is less than 13,000 lbs. or 5,900 kg. Most very light jets are driven through a conventional fuel propulsion system. However, in the recent years, hybrid/electric propulsion system is gaining traction. Under the scope of the research, only those jets have been considered whose maximum takeoff load is less than 13,000 lbs. or 5,900 kg. Very light jet has wide range of application in the area of passenger transport, training activities, military operations, and survey & research activities in commercial, civil, and military.

The report on the global very light jet market focuses on the current market trends and future growth opportunities of various aircraft types such as ultra-light aircraft and light aircraft. In addition, the report provides information on end uses such as civil & commercial and military. Moreover, it focuses on various material, including aluminum, composites, and others. The report provides information on propulsion such as electric/hybrid and conventional fuel. In addition, it analyzes the current trends of very light jets across different regions such as North America, Europe, Asia-Pacific, and LAMEA.

The key players analyzed in the global very light jet market include Bombardier Inc.,
