Abstracts

The global veterinary imaging market was valued at \$1,620 million in 2018, and is projected to reach \$2,651 million by 2026, registering a CAGR of 6.3%.

Veterinary imaging is a branch of veterinary medicine that is used to obtain medical images of animals for diagnosis of the disease. Imaging systems such as radiography X-ray, ultrasound imaging, MRI, CT imaging, endoscopy imaging, and others, are used to diagnose diseases in companion animals, large animals, live-stock animals, and others.

The veterinary imaging market is expected to experience significant growth during the forecast period owing to increase in adoption of companion animals, rise in animal health awareness, and growth in prevalence of animal disease with surge in expenditure on animal welfare majorly driving the market growth. In addition, rise in pet insurance purchase, technological advancements in veterinary imaging systems, increase in number of veterinary hospitals with surge in number of veterinary professionals, further supports the market growth.

The global veterinary imaging market is segmented based on product type, animal type, application, end user, and region. Based on product type, the market is classified as instrument and reagents.
