## **Abstracts**

Virtual Router Market Overview:

Virtual router is a software-based routing framework that facilitates the host machine to function as a typical hardware router over a local area network. In virtual routing, a form of network functions virtualization (NFV), the functions of traditional hardware-based network appliances are converted to software than can be run on standard Commercial Off-the-Shelf (COTS) hardware. This reduces the hardware costs and alleviates the need for proprietary hardware platform.

The need to improve network agility and efficient scale out, reduction in total cost of ownership (TCO) and surge in the demand for software defined networking (SDN) and NFV are anticipated to fuel the adoption of virtual router. However, security concerns associated with the virtualized environment are expected to impede the market growth. Furthermore, rise in advancements of virtual router software are expected to present major growth opportunities for the global virtual router market in future.

The global virtual router market is segmented based on component, end user, and region. Based on component, it is divided into software and services. Based on end user, the market is bifurcated into service provider and enterprise. Based on region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

The report provides the profiles of key players, namely 128 Technology, Nokia, Cisco Systems, International Business Machines Corporation (IBM), Hewlett Packard

Enterprise, Huawei Technologies Co., Ltd., 6WIND, Broadcom (Brocade Communications Systems), Ericsson, Juniper Networks, and Netronome.
