## **Abstracts**

The global vital signs monitoring devices market was valued at \$4,655.9 million in 2018 and is projected to reach \$7,813.5 million by 2026, registering a CAGR of 6.6% from 2019 to 2026. Vital signs monitoring devices are used for measurement of vital parameters, including blood pressure, heart rate, respiratory rate, & body temperature, and helps in monitoring physical functioning of the body. They offer clinically relevant information regarding the health status of patients. This information plays a vital role in identifying presence of any acute medical problem or chronic disease state. Vital signs of a patient are recorded at emergency departments, pre- and post-surgery, and during treatment at hospitals.

The global vital signs monitoring devices market is expected to witness a significant growth during the forecast period, owing to increase in importance of vital signs monitoring devices in home care settings and improved reimbursement scenario in developed countries. In addition, surge in geriatric population and rise in incidence rate of cardiovascular disorders such as hypertension and other preexisting health conditions including COPD, sleep apnea, and infectious diseases fuel the demand for vital signs monitoring devices, globally. Moreover, increase in use of vital signs monitoring devices for fitness monitoring and rise in ambulatory surgery centers across various countries, which use vital signs monitoring devices routinely, foster the market growth. However, lack of awareness about these devices in low- and middle-income

countries hamper the market growth.

The vital signs monitoring devices market is segmented on the basis of product type, end user, and region. By product type, the market is divided into blood pressure monitoring devices, pulse oximeters, and temperature monitoring devices. Under the blood pressure monitoring devices, the market is further divided into aneroid BP Monitors, digital BP monitors, blood pressure instrument accessories and ambulatory BP monitors. Under the pulse oximeters segment, the market is further classified into table-top/bedside pulse oximeters, fingertip pulse oximeters, hand-held pulse oximeters, wrist-worn pulse oximeters and pediatric pulse oximeters. Under the temperature monitoring devices segment, the market is further segmented into mercury-filled thermometers, digital thermometers, infrared thermometers and temperature strips. By end user, the market is segregated into hospitals & clinics, ambulatory surgery centers, and home care settings. By region, it is studied across North America, Europe, Asia-Pacific, and LAMEA.

Prominent players have adopted product development, product launches, approvals, and clinical trials as their key developmental strategies for expanding their product portfolio. For instance, on November 5, 2019 Philips launched next-gen vital signs monitor “EarlyVue VS30” for early diagnosing and patient intervention. The device captures medical data from a patient and transmits it to hospital’s medical records, thereby enhancing patient treatment and reducing errors. Moreover, reimbursement policies for these devices fuel the demand for vital signs monitoring products. For instance, Medicare offers reimbursement for pulse oximeters used for a pulmonary disease(s) in case of using diagnosis code ICD-9-CM, which describes a patient’s condition and motive of using the service or procedure. The present procedural technology identifies three codes for oximetry, namely, 94760, 94761, and 94762.
