Abstracts

Web real-time communication or WebRTC is an open standard project comprising APIs & communication protocols that enables peer-to-peer audio, video, and data communication between two web browsers or mobile application without using any need for additional plugins or downloading of native apps. This offers video chat, video calling, audio calling, peer-to-peer file sharing, and text chats usually in the web browsers. WebRTC is a peer-to-peer communicating technology, which eliminates the additional costs associated with bandwidths across the wire. It offers high performance and low latency. There are several uses for WebRTC such as basic video/voice chat, multiplayer gaming, file sharing, voice/video conferencing, and others.

Webification of real-time communication and rise in adoption of WebRTC technology among enterprises are some of the key factors that drive the growth of the global web real-time communication market. In addition, increase in ICT spending in developing countries and growth in internet connectivity in Asia-Pacific fuel the market growth. However, rise in security and privacy concerns are anticipated to restrict the market growth. On the contrary, proliferation of BYOD trend and increase in use of WebRTC for IoT provide lucrative growth opportunities for the global WebRTC market during the analysis period.

The market is segmented on the basis of component, WebRTC-enabled devices, industry vertical, and region. By component, the market is divided into solution and services. The solution segment is sub-divided into voice calling & conferencing, video calling & conferencing, message & file sharing, and others (social networking & gaming). By WebRTC-enabled devices, the market is categorized into mobiles, desktop, tablets, and others. As per industry vertical, it is divided into banking, financial services, & insurance (BFSI); retail; telecom & IT; public sector; media & entertainment; manufacturing; and others.
