Abstracts

Window sensors are also known as door sensors and their working depends on magnet and a reed switch. The reed switch is attached to a window frame and magnet is installed on window. When the window with an armed sensor is opened, the magnet is pulled away from the reed switch and the alarm is triggered. As the windows are a potential point of entry for the intruders, window sensor is an essential part of home security system. Leading manufacturers of home security systems are introducing systems with smart technologies such as Internet of Things (IoT), Artificial intelligence (AI), and others.

Window sensors are anticipated to witness significant growth over the years, owing to rise in awareness among consumers about home security systems.

The global window sensors market is segmented based on type, application, and region. Based on type, the market is divided into indoor and outdoor. Based on application, it is categorized as commercial and household. Based on region, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
