## **Abstracts**

The global bioplastic market was valued at \$4.6 billion in 2019, and is projected to reach \$13.1 billion by 2027, growing at a CAGR of 13.8% from 2020 to 2027.

Bioplastics are the family of products derived from the renewable feedstocks such as corn, sugarcane, and cellulose. Eco-friendly nature, availability of renewable feedstocks, and favorable government policies were the prime reason for manufacturers to shift toward bio-based plastics. Bioplastics are consumed across a wide range of industries such as rigid packaging, flexible packaging, textile, agriculture & horticulture, consumer goods, automotive, electronics, building & construction, and others. In 2019, the adoption of bioplastics in packaging was highest and is expected to grow at the highest CAGR during 2020 to 2027. Bioplastics possess properties such as gloss, barrier effect, antistatic behavior, and printability; thereby, making it suitable for rigid packaging application. Furthermore, packaging industries have substantial curiosity for the biodegradability as there is an increase in demand for packaging, resulting in accumulation of waste. Therefore, packaging industry consumes bioplastics to decrease or recycle the accumulated waste products.

The global bioplastic market is segmented on the basis of type, application, and region. On the basis of biodegradable plastic type, the market is divided into polylactic acid (PLA), polybutylene adipate terephthalate (PBAT), polybutylene succinate (PBS), polyhydroxyalkanoates (PHA), starch blends, and others. On the basis of non-biodegradable plastic type, the market is segmented into PE, PET, PA, PP, PEF, PTT and Others.

On the basis of application, the market is categorized into packaging, agriculture, textile, consumer durable, and others. The market is studied across North America, Europe, Asia-Pacific, and LAMEA. Asia-Pacific is projected to hold a major share in the market in terms of value contributing to the huge investments made by the global giants in the region.
