## **Abstracts**

The global biopsy devices market was valued at \$2,728 million in 2018 and is expected to reach \$4,310 million by 2026, registering a CAGR of 5.9% during the forecast period.

Biopsy is a procedure to remove a sample of cells or piece of tissue from living body to analyze it in a laboratory for diagnosis of diseases. Biopsy tests are performed by surgeons, radiologists, and interventional cardiologists. There are various types of biopsy devices used in diagnosis of cancers, such as core biopsy devices, aspiration biopsy needles, vacuum-assisted biopsy devices, biopsy forceps, localization wires, and others. Core biopsy devices are used to investigate superficial lumps or masses for diagnosis of cancer. In addition, vacuum-assisted biopsy devices and aspiration biopsy needles are non-invasive and provide efficient sample collection.

Significant increase in cancer incidence, advent of novel and minimally invasive biopsy

procedures, and rise in public awareness for disease screening are the major factors that drive the growth of the biopsy devices market. In addition, rapid technological advancements such as 3D optical biopsies, MRI-targeted biopsies, and ultrasound-guided biopsies, and rise in awareness on diagnosis of chronic diseases are other factors that contribute toward the growth of the market. In addition, surge in adoption of biopsy devices across the globe boosts the growth of the biopsy devices market. Furthermore, growth potential offered by developing economies present lucrative opportunities for the growth of the market during the forecast period. However, stiff competition from alternative cancer diagnostic tests, and high cost and fluctuating reimbursement policies hinder the growth of this market.

The biopsy devices market is segmented on the basis of product, application, imaging technology, end user, and region. Based on product, the market is divided into needle-based biopsy instruments, biopsy forceps, localization wires, and other products. Based on application, the market is categorized into breast biopsy, gastrointestinal (GI) biopsy, prostate biopsy, liver biopsy, lung biopsy, kidney biopsy, gynecological biopsy, and others. Based on imaging technology, the market is divided into MRI-guided biopsy, stereotactic-guided biopsy, ultrasound-guided biopsy, CT scan, and others. Based on end user, the market is classified into diagnostic and imaging centers, hospitals, and others. Based on region, the biopsy devices market size is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
