## **Abstracts**

Dental implants & prosthetics are commonly used during tooth replacement procedures. Most commonly, a dental implant consists of a titanium-based cylinder, which replaces the root of a missing tooth. Moreover, the additional parts (prosthetics), such as crown/cap is placed over this implant to ensure complete retention of the lost tooth. The global dental implants and prosthetics market was valued at \$7,031 million in 2016, and is projected to reach \$12,743 million by 2023, at an estimated CAGR of 8.8% from 2017 to 2023.

Increase in incidence of dental caries and other periodontal diseases, demand for cosmetic dentistry, growth in dental tourism in emerging markets, and rise in prevalence of edentulism (complete tooth loss) drive the market growth. However, high cost of dental implants and limited reimbursement for cosmetic dental procedures restrain the market growth. The growth opportunities in the emerging economies of Asia-Pacific and LAMEA are expected to provide numerous opportunities for market growth during the forecast period.

The report segments the market based on product, material, and geography. Based on product, it is bifurcated into dental implants and dental prosthetics. Dental implants are expected to be made out of metals, polymers, ceramics, and biomaterials. Geographically, it is analyzed across North America (U.S., Canada, and Mexico), Europe (Germany,

France, Italy, UK, Spain, and rest of Europe), Asia-Pacific (China, Japan, Australia, India, South Korea, and rest of Asia-Pacific), and LAMEA (Brazil, South Africa, Saudi Arabia, and rest of LAMEA).
