Abstracts

Shale gas, an emerging concept presently popular only in few regions (namely U.S., Canada) and industries has the potential to impact global energy industry significantly. The increasing popularity of shale gas in various industries has advocated a growing awareness regarding the benefits of shale gas as an energy resource. The significant number of shale reserves all over the globe and the competitive price of shale gas are factors which supplement the growth of the shale gas market. Shale gas has been commercialized only in developed regions such as North America, where individual countries produce the gas. Moreover, advanced technologies such as hydraulic fracturing & horizontal drilling are used in the extraction of shale gas; this drives the growth of shale gas in the United States and frees the country from dependence on other natural gas resources. Top players are adopting acquisition, joint ventures, partnerships and collaborations as major developmental strategies to help expand their global reach, and improve their services, thereby enabling them to penetrate the global shale gas market. For instance, Baker Hughes has acquired BJ Services to diversify their international pressure pumping business. The acquisition has helped the company to broaden its portfolio by enhancing the technologies used in the exploration of unconventional gas and deepwater fields. Also, Anadarko have signed an agreement with FMC Technologies to develop new generation subsea production equipment and systems.

There is a growing tendency among the companies to enter into the most potential market as the demand for shale as a natural gas would increase in future. As a substantial number of shale reserves are available across various regions, shale gas production enables companies to capture value from the market. The ability of shale

gas to burn cleaner than other fossil fuels such as coal has encouraged its adoption in various industries; Shale gas is therefore gaining prominence as a cutting edge resource that could be a game changer for various countries as well as industries. Additionally, emerging markets such as China, Algeria and Indonesia provide substantial opportunities for the production of shale gas as there is an abundance of shale reserves in these regions. The global shale gas market is anticipated to grow to \$104 billion in 2020 (volume production of 19.6 tcf), at a CAGR of 9.3% from 2014 to 2020.

The global market is segmented based on technologies used in extraction of shale gas, its various applications and geography. Geographically, the market is segmented into different regions such as North America, Europe, Asia Pacific and LAMEA. The rising production of shale gas in the North America is impacting the global production as it is the only region generating highest revenue for the global shale gas market. Moreover, Asia-Pacific and European region has tremendous potential to grow as a significant number of reserves are untapped in these countries.
