## **Abstracts**

global xanthan gum market was valued at \$722 million in 2016 to reach \$1,076 million, and is anticipated to grow at a CAGR of 5.9% from 2017 to 2023. Xanthan gum is a polysaccharide secreted by the bacterium *Xanthomonas Campestris*. It owns several extraordinary and useful properties, such as change in viscosity at fluctuating temperatures, high viscosity at low concentrations, and excellent stability over a wide pH range. Moreover, it has the ability to increase the viscosity of the liquid by the addition of small quantity of gum as compared to other polysaccharides. It also provides good freeze-thaw stability and shows remarkable suspension characteristics. It is used as a stabilizer, emulsifier, thickener, suspending agent, fat replacer, and bodying agent in wide range of applications, such as food & beverages, personal care & cosmetic, oil & gas, medical, and other industrial applications.

In 2015, Asia-Pacific and North America were the leading regions, in terms of both value and volume. Asia-Pacific is the leading and fastest growing region for xanthan gum, owing to the increase in processed foods production and development in oil & gas production in China and India. The growth of xanthan gum in North America is driven by the development of new technologies to enhance the quality of xanthan gum and the implementation of favorable regulatory policies. The factors that drive the global market are increase in demand for xanthan gum in food & beverages industry, rise in demand for gluten-free products, change in consumer preference, surge in consumption of convenience food products, and multi-functionality of xanthan gum in varied application

areas. However, high cost of xanthan gum and availability of relatively cheap substitutes and anti-dumping policies on xanthan gum hamper the market growth during the forecast period.

The global xanthan gum market is segmented based on application, function, and geography. On the basis of application, it is divided as food & beverages, oil & gas, personal care & cosmetics, medical, and others. On the basis of functions, it is categorized as thickening agent, stabilizing agent, suspending agent, fat replacer, and others. Geographically, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

In September 2016, CP Kelco announced a plan to build a new manufacturing facility in North America to enhance its xanthan gum and gellan gum production capacity and also expand its biogums manufacturing footprint in the region.
