India’s rich and varied forest wealth with a variety of deciduous, coniferous, tropical and evergreen trees is an essential resource for the wood panel industry. Plywood is manufactured from timber logs and formed by combining thin sheets of face and core veneer. The industry is undergoing a transformational shift from unorganized market to the organized. An increased willingness to spend on branded plywood amongst middle class has been noted in the recent years which implies greater importance being given to the quality of the product.

The revenue of plywood market in India was estimated to be INR ~ million for FY’2014 and grew at CAGR of ~% during FY’2010-FY’2014. The market was dominated by the unorganized players, who captured ~% of the total market sales value in FY’2014, while the remaining ~% of the share belonged to the organized players. In accordance with the lifestyle and preferences of different regions, the maximum demand of plywood was registered from North and South India.

Owing to rising nuclear families, increasing disposable income, favorable demographics and upswing in the infrastructure industry, the furniture industry in return is expected to grow at CAGR 19.7% for FY'2015 to FY'2019. There are certain hurdles in this industry such as availability of raw material and forex volatility. With increasing plantation through agro forestry and setting up face veneer plants in the foreign countries and by entering currency options contract, the companies are expected to fare out well with these arising difficulties. The plywood industry would play a vital role in fueling the growth of the country. Since plywood and allied products are an essential part of housing and construction, the demand of plywood is directly related to the real estate sector and the growth of infrastructure.
