Abstracts

1,2,4,5-tetramethylbenzene, namely durene, is a kind of colorless crystals solid powder (some companies' products are liquid for their low technology) with the formula $C_6H_2(CH_3)_4$. They can be divided into industry grade and reagent grade. They can be used for manufacturing PMDA, as organic synthesis intermediate or in other fields. At present the abroad companies usually put the 1,2,4,5-tetramethylbenzene used for the manufacture of PMA & PMDA directly, very few companies sold 1,2,4,5-tetramethylbenzene products. In China, the 1,2,4,5-tetramethylbenzene manufacturers sell them as the products, and partly of the companies used them as materials for the producing of PMA & PMDA too. So in this report we only static the products which transferring in the market not including the products which are not sold in the market. However, at present only the China manufacturers sold their products in the market, so in this report the companies are all China players.
