Abstracts

Projectors with ultra-short throw lenses are designed to produce larger projected images at a shorter throw distance. This means that unlike the standard or long throws projectors; you can get the big picture even when you're caught in a tight space environment with much less space required between the projector and the screen. Gone are the worries about landing a tiny projected image or blocking out the projections with your shadows when you're using a standard/long throw projector in a space-constrained room.
