## Abstracts

The chemical composition of the aluminium-scandium master-alloy is 2% scandium and the balance is 99.7% aluminium. The master alloy is used to add scandium to Al-Mg-Zr containing alloys, which are used in the form of sheet and plate. These sheets and plates are mainly used by aircraft manufactures. The scandium content in the aluminium sheet and plate varies from 0.2-0.4% scandium.

Aluminium scandium containing alloys combine high strength, ductility, weld-ability, improved corrosion resistance and a lower density (as a result of the magnesium in the alloy). The combination of all these properties makes aluminium-scandium containing alloys extremely suitable for aerospace industry.

According to APO Research, The global Aluminium-Scandium market was valued at US\$ million in 2023 and is anticipated to reach US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.

Global MAuminium-Scandium key players include RUSAL, Intermix-met, KBM Master Alloys, Stanford Advanced Materials, etc. Global top four manufacturers hold a share over 50%.

China is the largest market, with a share over 35%, followed by China, and North America, both have a share about 50 percent.

In terms of product, Al-Sc 2% Alloy is the largest segment, with a share over 90%. And in terms of application, the largest application is Defense & Aerospace, followed by Transportation, Consumer Goods , etc.
