Abstracts

This report mainly studies industrial boilers. There are two types of industrial boiler products. One is steam, which is used for power generation or gas supply. For example, a chemical fertilizer plant can use steam to vaporize and use coal as a raw material to synthesize chemical fertilizer. This is a typical industrial boiler. Coal-fired boilers still account for the majority, and gas-fired waste heat boilers are generally used to recover waste heat. A common industrial boiler is a circulating fluidized bed boiler. Industrial boilers are important thermal power equipment, and our country is the country that produces and uses the most boilers in the world today.

This report only includes boiler equipment, not engineering service market information.
