Abstracts

Fish oil is an oil rich in EPA(eicosapentaenoic acid) and DHA(docosahexaenoic acid). The amount of EPA and DHA in common fish is very small, while the amount of EPA and DHA in Marine fish, such as anchovies, anchovies and sardines, is high. Because there is no essential difference between common Marine fish oil and deep-sea fish oil EPA and DHA, major deep-sea fish species have achieved large-scale artificial cultivation. Also subject to cost and price constraints, deep-sea fish are no longer caught for fish oil extraction.
