Summary

Diamond-Like Carbon (DLC) has some of the valuable properties of diamond, including: high hardness, low friction, resistance to wear, chemical inertness, biological compatibility, electrical insulation, optical transparency, and smoothness.

Diamond-Like Carbon (DLC) coating is an amorphous, stable carbon layer that does not react to acids or alkaline. It is highly resistant against oxidation and corrosion. The high density and amorphous structure of DLC inhibit corrosive by-products from penetrating into tools. The chemically inert characteristics of diamond-like coatings dramatically reduce possibility of cold welding and material pickup on the surface of the tool.

DLC coatings are a mixture of sp² and sp³ bonded carbon atoms with a hydrogen concentration between 0 ~ 80%.

This coating provides the highest hardness and abrasion resistance characteristics.

Typical applications include high wear environments involving molds and metal forming.

Note: DLC Coating market is a processing mode industry. The manufacturers in the report are subcontractors of DLC Coating service. The capacity and production volume refers to dealing capacity and process volume of DLC Coated product by Unit. The price of DLC Coating product refers to coating fee per product (instead of the sale price of coated product).

The Diamond-Like Carbon Coating industry can be broken down into several segments,

Hydrogen Free DLC, Hydrogenated DLC, Others, etc.

Across the world, the major players cover Oerlikon Balzers, IHI Group, CemeCon, Morgan Advanced Materials (Diamonex), Miba Group (Teer Coatings), Acree Technologies, IBC Coatings Technologies, Techmetals, Calico Coatings, Stararc Coating, etc.
