Abstracts

Traditional furnace heating systems heat the air, which then warms up the people in the room. Heating mat and heating cable work by directly warming the people and objects in a room. This type of heating often feels like the warmth of the sun and because the heat is stored in your floor, it is actually very efficient to run. It is more efficient than baseboard heating and usually more efficient than forced-air heating because it eliminates duct losses. People with allergies often prefer radiant heat because it doesn't distribute allergens like forced air systems can.
