Abstracts

Emergency warning lights are lighting devices that provide visual signaling to people in hazardous situations. In situations of accidents, mishaps, fire, or any other emergency situation, emergency warning lights perform two basic functions. The first is that, emergency warning lights attract the attention of people who are in the vicinity of the problem situation or about to approach the situation. Emergency warning lights alert people to potential hazards, and make them aware of the existence of an emergency. The second function is that, emergency warning lights provide a visual signal and direct people to take a pre-determined action when encountering an emergency. Emergency warning lights perform this function through the color or flashing pattern of the lights. Tremendous amount of research has been done on the visual perception of humans when exposed to lights of specific colors, flash intensity, flash rate, and other parameters. Thus, emergency warning lights have been designed accordingly to provide correct visual signaling, and make decision making easier in potentially dangerous situations.
