Summary

Galvanized steel wire refers to any steel wire product that has subjected to a galvanizing process to improve its resistance to corrosion. This process typically involves dipping the finished wire product into a bath of heated zinc compound to form a scratch- and corrosion-resistant coating across the entire surface of the wire. Although this coating is not considered to be a permanent anti-corrosion solution, it does greatly increase the wire's resistance to rust and thus considerably prolongs its service lifespan. Galvanized steel wire is available in a wide range of gauges and lengths, and is used extensively in the construction industry and in the industrial, do-it-yourself, and agricultural sectors.
