Abstracts

Aluminum nitride (AlN) is the only technical ceramic material that features an extremely interesting combination of very high thermal conductivity and excellent electrical insulation properties.

Aluminum nitride (AlN), a covalently-bonded ceramic, is synthesized from the abundant elements aluminum and nitrogen. It does not occur naturally.

AlN is stable in inert atmospheres at temperatures over 2000°C. It exhibits high thermal conductivity but is, uniquely, a strong dielectric. This unusual combination of properties makes AlN a critical advanced material for many future applications in optics, lighting, electronics and renewable energy.

This report studies the bare AlN substrates (or blank substrates, white substrate).

According to APO Research, The global AlN Ceramic Substrates market is projected to grow from US\$ million in 2024 to US\$ million by 2030, at a Compound Annual Growth Rate (CAGR) of % during the forecast period.

The global bare AlN substrates market is dominated by few players from Japan, Chinese Taiwan, and Chinese mainland, such as Maruwa, Toshiba Materials, Leatec Fine Ceramics, and Fujian Huaqing Electronic Material Technology, etc.
