Summary

Amblyopia Therapeutic Apparatus is a device used for the treatment of Amblyopia, also called “lazy eye”. Amblyopia is decreased vision in one or both eyes due to abnormal development of vision in infancy or childhood. In amblyopia, there may not be an obvious problem of the eye. Vision loss occurs because nerve pathways between the brain and the eye aren't properly stimulated. The brain “learns” to see only blurry images with the amblyopic eye even when glasses are used. As a result, the brain favors one eye, usually due to poor vision in the other eye. Generally, 6 to 12 years are the best time for treatment of Amblyopia. In USA and Europe, doctors are recommending the training therapy; Amblyopia Therapeutic Apparatus is popular in China.
