Summary

Anti-fog coatings are a type of hydrophilic coatings which contain polyvinyl alcohol in their formulation. These coatings help disperse small droplets of fog formed due to the condensation of water and are therefore also known as non-mist coatings. Anti-fog coatings are transparent, abrasion-resistant, and durable in nature; and thus do not degrade even after extensive usage.

It is ideally suited for surfaces where prevention of fogging and frosting is needed. The coating may be used on sports and safety goggles, glasses, face shields, respirators, outdoor signage, camera heads, environmental enclosures, windows, mirrors, windshields, displays, and other applications where fogging needs to be mitigated.
