Abstracts

Application modernization is the refactoring, re-purposing or consolidation of legacy software programming to align it more closely with current business needs.

The goal of an application modernization project is to create new business value from existing applications. An application is a program designed to perform a specific function directly for the user or, in some cases, for another application program. Keeping legacy applications running smoothly can be a time-consuming, resource-intensive process, especially when the software becomes so outdated that it becomes incompatible with newer versions of the underlying operating system (OS) or system hardware.

According to APO Research, The global Application Modernization Services market was estimated at US$ million in 2023 and is projected to reach a revised size of US$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.

Global Application Modernization Services key players include IBM, Atos, Cognizant, Accenture, etc. Global top four manufacturers hold a share over 55%.

United States is the largest market, with a share about 35%, followed by Europe and China, both have a share about 35 percent.

In terms of product, Cobol is the largest segment, with a share over 60%. And in terms of application, the largest application is Emulation, followed by Translation, Business rules extraction, etc.
