## Abstracts

Artificial blood vessels, also known as vascular prostheses, the main material of artificial blood vessel include: EPTFE, Polyethylene Terephthalate, Polyurethane and so on. The main function of artificial blood vessels can replace the pumping blood. Now mainly used for replacement of aorta, the role of artificial blood vessels are connected the two ends of blood vessels, the blood circulation to recover.

The current artificial blood vessels are mostly polyester fibers or PTFE fibers woven into the corrugation of the tube has certain porosity. It implanted in the body which can form a layer of fake endometrial. Due to avoiding coagulation and thrombosis, it's a better solution to the problem of preventing thrombosis. An organism that can be absorbed by the material emerging non-absorbable material and cross-woven, or on the large pore fabric coating absorbable material (e.g. collagen fibers) of the artificial blood vessel, it is easy to fake endometrial growth acceleration effect better.
