Abstracts

Automotive Exhaust Manifold Gasket is the component in the automotive engine, between the surface of the cylinder head and the exhaust manifold. The exhaust manifold takes the burned exhaust gases from the engine's cylinders and ejects the gas through the exhaust system and out through the car's tail pipe. An exhaust manifold gasket seals the connection between the manifold and cylinder head. This prevents exhaust leakage out of the connection and also ensures that all exhaust gas will flow through the catalytic converter for treatment.
