Abstracts

In general, a windshield washer system for an automotive vehicle includes a fluid reservoir, a pump mounted within the fluid reservoir, and a nozzle operatively associated with the pump for applying fluid from the reservoir to an outside surface of the automotive vehicle. This is used in cleaning the windshield with the windshield wiper while the vehicle is being driven.

In some vehicles, there is also a heater mounted in proximity to the pump so as to provide heat to the fluid contained within the reservoir. Washer fluid may be preheated before being delivered onto the windshield at an even sub-freezing temperature, with aqueous-based fluids either none, or minimal freezing point depressants contained therein. And some pumps are not mounted within the fluid reservoir.
