Summary

This report studies the Car Dashcam market. A 'dash cam' is exactly what its name promises it to be: a camera that's mounted in or around your car's dashboard. The cams are easily attached using a suction cup mount, direct dash friction mounts (those sticky rubber pads) and even built right into a not-too-conspicuous replacement rear mirror for your ride. Powered by batteries, hardwired into vehicle's 12-volt system or via cigarette lighter, the dash cam faithfully records all it sees.

The cameras come in every conceivable configuration, from a single Channel to multiple lenses allowing for simultaneous front and rear recording. While 1080p-capable cams are now becoming standard fare, VGA versions exist and can be had for pocket change.

The law generally says that dash cams are legal. There's no reasonable expectation of privacy while in public. In fact, dash cams have potential to simplify the police officer's job at an accident scene.
