Summary

Carbon fibers are from the most recent & probability the most spectacular addition to the range of fiber available for commercial use. Carbon fiber comes under the very high modulus of elasticity and flexural strength. These are expansive. Their strength & stiffness characteristics have been found to be superior even to those of steel. But they are more vulnerable to damage than even glass fiber, and hence are generally treated with resin coating.

Carbon Textile Reinforced Concrete is one type of Textile Reinforced Concrete which is made by carbon fiber.
