Summary

Coated glass is also known as reflective glass. The glass surface is coated with one layer or multi layers of metal, alloy or metallic compound film, so as to change the optical properties of glass, to meet special requirement?such as low maintenance, special reflection, transmission, absorption properties, scratch resistance, corrosion resistance, etc.

For a long time windows were regarded as heat sinks in winter, while in summer life under glass became a torment due to the greenhouse-like effect. The cause for that the window glass is transparent not only for the human eye, but also in the infrared spectrum, and allows heat radiation to pass through it practically without hindrance.

To alleviate this drawback of glass, coated glasses is used for buildings. The job of the coating is to influence the transmission properties of the glass such that it meets energy requirements more efficiently. As a building material, glass plays an increasingly important role in building and architecture. Increasingly there of erecting facades.
