Summary

Compressed natural gas vehicle is an alternative fuel vehicle that uses compressed natural gas as the fuel rather than gasoline or diesel. CNG, or compressed natural gas, is stored at high pressure, 3,000 to 3,600 pounds per square inch (21 to 25 MPa). The required tank is more massive and costly than a conventional fuel tank. The CNG vehicle's emissions are cleaner, with lower emissions of carbon and lower particulate emissions per equivalent distance traveled. There is generally less wasted fuel. Two gaseous fuels that can be used in spark-ignition engines are Liquefied Petroleum Gas (LPG) and natural gas. Natural gas is a naturally occurring mixture of hydrocarbons consisting of at least 80% methane, with lesser amount of propane ethane and butane. LPG is also a mixture of hydrocarbons, but its main constituent is propane, with lesser amounts of ethane and butane.
