Abstracts

Cored wire electrodes, also simply called cored wire, are small tubes filled with metallic or mineral powders, used for steelmaking and casting applications. They are manufactured as wire with the proper diameters in molding or drawing lines. They have higher deposition efficiency than solid wire, which in turn speeds welding tasks. The core of metal-cored wire contributes almost entirely to the deposited weld metal.

This report is focused on metallurgical cored wire type. According to the different mental types of core layers, cored wire can be divided into pure calcium, silicon-calcium, pure aluminum, tombarthite and many other kinds. Each kind of alloy cored wire can be divided into different products as well, such as Ca28Si55 and Ca31Si65 and so on.
