Abstracts

Diesel Cars used diesel engine which means fuel is mixed with air as it goes into the engine and that mixture is compressed internally, inside the engine's cylinders. At some point, the fuel ignites (combusts), driving a piston down and turning the crankshaft, which is connected to the vehicle's transmission and ultimately turns the wheels. The piston then moves up in the cylinder, pushing the burnt gases out of the engine and out the tailpipe as exhaust. This cycle repeats several times per second.
