## Abstracts

E-passport is an electronic passport with high security printing, an inlay including an antenna and a microprocessor, and other security features. An E-passport is a biometric passport which includes a chip, which can be used at the automated E-passport gates instead of having your passport checked by a Border Force officer. The chip holds the same information that is printed on the passport's data page: the holder's name, date of birth, and other biographic information. In some countries, including Germany, E-passport include two fingerprints as well.

An electronic visa (E-visa) is one of visa types issued to foreigners by Immigration Department via electronic system. E-visa, also known as e-visa, refers to the 'electronic' of traditional paper visas. All information on passport holders' visas is stored electronically in the visa issuing authority's system. After successful of e-visa processing, the visa can be printed and used.

According to APO Research, The global E-passport and E-visa market was estimated at US\$ million in 2023 and is projected to reach a revised size of US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.
