### Summary

Elastic rail fastener is used to link the rail and tie (or other types of track basis) on the track, also known as the intermediate coupling member.

It includes spikes, pads under rail and elastic fastener clips.

Fasteners should be long-term, effectively maintaining a reliable link rail and sleepers, preventing relative movement of the rail sleepers, and can give full play to its performance under dynamic shock absorption cushioning effect, delaying the accumulation of residual deformation track.

Thus it requires sufficient strength, durability and some flexibility, but also simple structure, easy installation and removal.
