Abstracts

Employee scheduling software automates the process of creating and maintaining a schedule. Automating the scheduling of employees increases productivity and makes many secretarial and manual scheduling positions obsolete. Such software will usually track vacation time, sick time, compensation time, and alert when there are conflicts. As scheduling data is accumulated over time, it may be extracted for payroll or to analyze past activity. Although employee scheduling software may or may not make optimization decisions, it does manage and coordinate the tasks. Today's employee scheduling software often includes mobile applications. Mobile scheduling further increased scheduling productivity and eliminated inefficient scheduling steps.

According to APO Research, The global Employee Scheduling Software market is projected to grow from US\$ million in 2024 to US\$ million by 2030, at a Compound Annual Growth Rate (CAGR) of % during the forecast period.

North America is the largest region of Employee Scheduling Software, with a market share about 40%. It was followed by Europe with 30%. The industry's leading producers are Pioneer Works, Deputechologies and Paycor, and they had about 10% combined market share.
