## Abstracts

Forged aluminium wheels are one-piece wheels formed from a single block of metal by hot forging, followed by hot or cold spinning and the necessary machining operations. The forging process permits flexibility in design of the styled disk, almost similar to cast wheels. Onepiece forging is considered superior to other forms of wheel manufacturing in providing ultimate strength while reducing weight compared to cast and multi-piece aluminium wheels.

Forged wheels are typically around 25% lighter than cast wheels (and potentially even more).
