Summary

Glass Fiber Reinforced Gypsum is a composite of high strength alpha gypsum reinforced with glassfibers that can be factory molded into virtually any shape or size. GFRG (or GRG) is a non-combustible material (test results of flame spread and smoke development values as per ASTM E-84) and even the largest parts only weigh 2-3 pounds per square foot (10-15 kg/m²). Similar to traditional plaster castings but considerably lighter and stronger, Glass Fiber Reinforced Gypsum is typically field finished with any interior paint. Joints can be taped and finishing is similar to drywall finishing. The use of post-consumer recycled material, the fact that GFRG castings are made to size and are designed to minimize excessive framing, makes Glass Fiber Reinforced Gypsum a favorable choice for LEED or green construction projects.

In 1977, glass reinforced gypsum was introduced to the UK from the United States. This was a new concept in building materials. It was a lightweight, strong and durable material. It could be used for both structural and decorative interior construction, and it would prove to be enormously popular throughout the later 20th century. It remains highly popular today, thanks to its flexibility as a material, and the fact that it can be easily used in a very wide range of settings. In fact, as long as it isn't subjected to damp, it can be and is used in all manner of buildings, from casinos and churches, to theatres and shopping centres, hotels and private homes.
