### Summary

This report studies the Household Hair Dryer market. Hair Dryer is an electromechanical device designed to dry the hair. Most people are familiar with the daily routine of washing, drying, and styling their hair. Although hair will eventually dry on its own if given enough time, most people reach for a hair dryer to speed up the process. Hair dryers work through two basic components that operate independently from one another: a heating device and a fan that takes in air from the side and propels it out the main barrel. Hair dryers function by increasing the temperature of the air around the hair, helping water to evaporate from the hair. The heat helps individual water molecules to separate and enter their gaseous state.
