Abstracts

HV capacitors are key components in circuit breakers and capacitive voltage transformers, used in the transport and distribution of electrical energy in electric utility grids and other high-voltage installations worldwide. Within each major capacitor dielectric, high voltage has a different definition. To summarize, the overwhelming majority of capacitors consumed for high voltage applications are electrostatic plastic film capacitors, and even then there is a focus on the polypropylene type film capacitor dielectrics only. Polypropylene capacitors are applicable to the hundreds of thousands of and are truly separate from other dielectrics in that respect. Ceramic capacitors - also electrostatic, can be manufactured to withstand up to 100,000 volts. Aluminum electrolytic capacitors are also included in this discussion, especially the screw terminal and snap in types that are manufactured to operate up to 500 volts per cell. Other capacitors consumed in high voltage circuits include tantalum wet capacitors, reconstituted mica capacitors, glass dielectric capacitors and diamond-like carbon capacitors.
